*or scan the QR code provide here.*

# Benefits of Composting your Food Waste

- Composting food waste provides a reuse for kitchen scraps, expired foods and more.
- Composting food waste can prevent excessive amounts of waste from entering your local transfer station and eventually a landfill.
- Creating your own compost at home can save you money, instead of spending money on store bought fertilizers.

- Compost produced from food waste can help strengthen your soil's ability to retain water, which keeps your plants hydrated.
- Using organic food waste compost is healthier for our environment than chemical fertilizers.
- Compost that you make at home can be used to grow healthy foods in your garden.
